CSS - Responsive Web Design (RWD)

UFCFES-30-1

Overall Learning Map

What we covered so far...

HTML

CSS3 in detail

What we'll cover today...

How to build our web pages look good on different devices/screen sizes?

- Media queries
- Breakpoints

Books and Other material

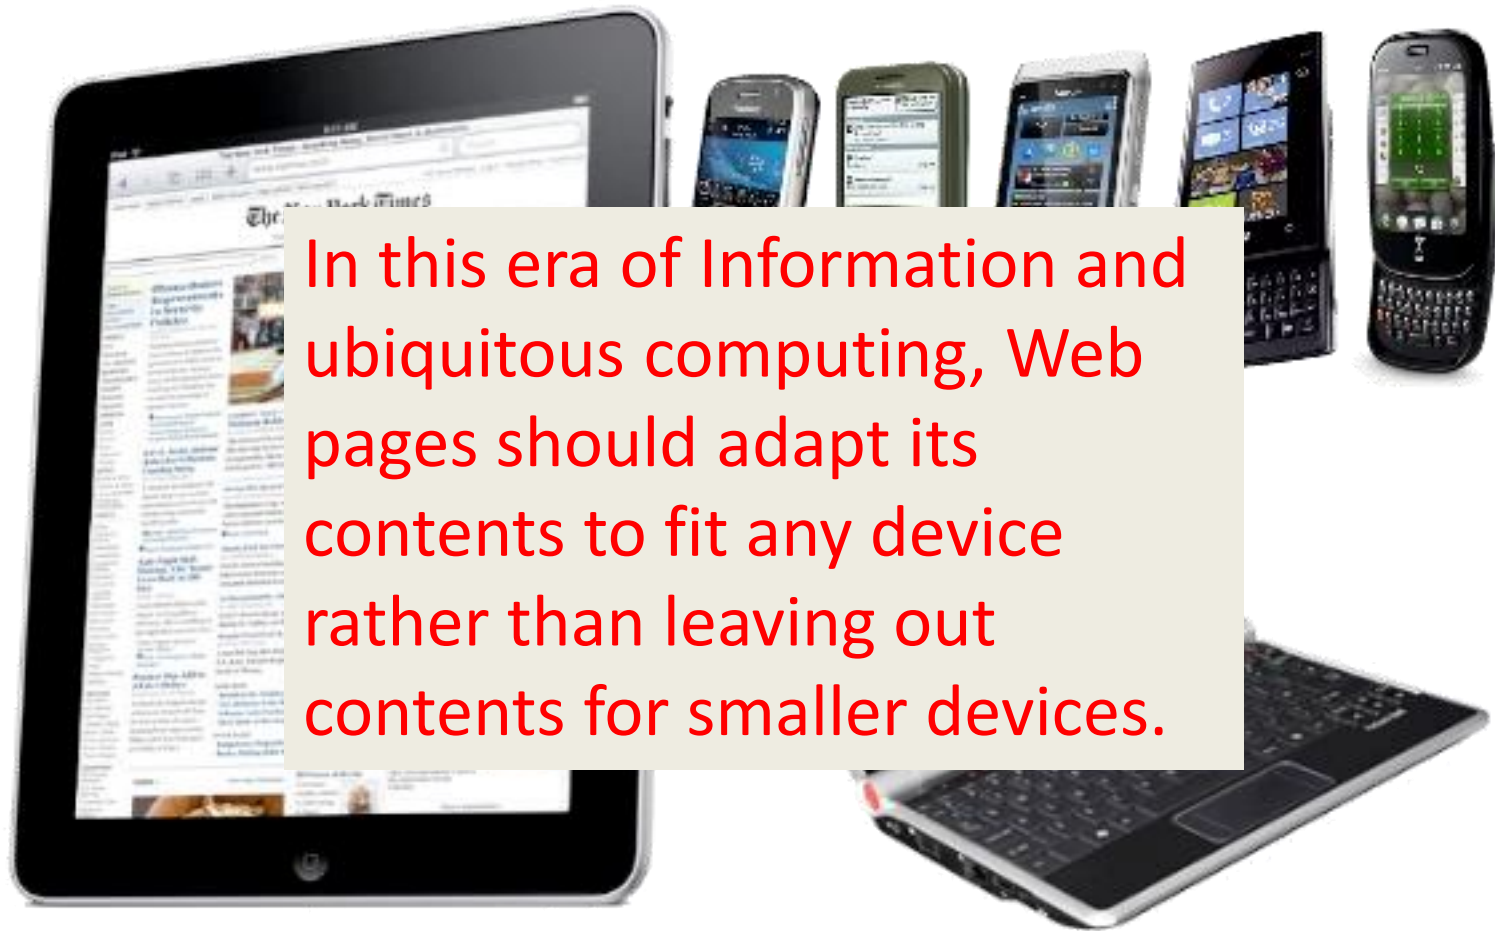

- *Responsive Web Design with HTML5 and CSS3, Ben Frain, PACT Publishing, Birmingham.*
- W3School
 - http://www.w3schools.com/css/css_rwd_intro.asp
- Others:
 - <http://learn.shayhowe.com/advanced-html-css/responsive-web-design/>

Traditional Fixed-width design does not work any more!

Image Source: http://www.myquickapps.com/apps/list.php?_meta=blog_bak.xml&_application=myquickapps&categories=home&_menu=1.xml&_lang=

Traditional Fixed-width design does not work any more!

In this era of Information and ubiquitous computing, Web pages should adapt its contents to fit any device rather than leaving out contents for smaller devices.

Image Source: http://www.myquickapps.com/apps/list.php?_meta=blog_bak.xml&_application=myquickapps&categories=home&_menu=1.xml&_lang=

Responsive Web Design (RWD)

- **Viewport:** User's visible area of a web page; varies for each device with different screen sizes
 - Web **browsers auto shrink web contents** into small size that fits into device screen but difficult to read without zooming and scrolling!
 - RWD is a way of using **HTML and CSS to change the webpage layout** when it renders on different screen sizes
 - **It is not a program or JavaScript.** It is for better **user experience & outreach**
- Existing websites can also adopt responsive design
 - *Fixed to Fluid layouts formula: $target \div context = result$*
 - **Example:** A **rectangle** (Target) of width 300px in a **viewport** of width 900px (Context) can be changed to $300/900 * 100 = 30\%$ width size (Result) for RWD
- **Self study:** W3School - http://www.w3schools.com/css/css_rwd_intro.asp

Desktop

*RWD is about using HTML and CSS to
resize, hide, shrink, enlarge, or move the
content to make it look good on any
screen*

Tablet

Phone

RWD - HTML5 and CSS3

- RWD has three main elements:
 - Flexible layout --> Grid view
 - Capable of dynamically resizing to any width
 - Media Queries
 - Capable to specify different styles for browser/device circumstances
 - Viewport - Meta tags
 - Flexible media e.g. scalable Images, Videos

RWD Grid View

- Divide web page into columns (and rows), this will make it easy to place elements on page
- A responsive grid view has **12 columns** and has **total width of 100%**

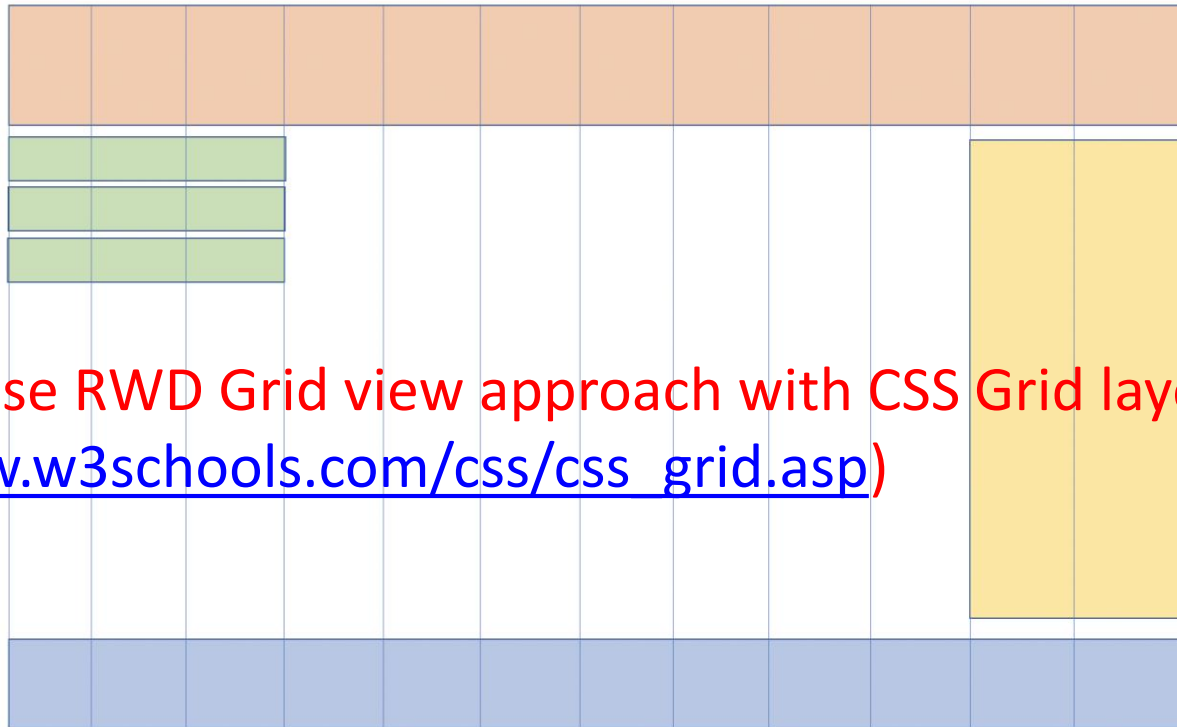

RWD Grid View

- Divide web page into columns (and rows), this will make it easy to place elements on page
- A responsive grid view has **12 columns** and has **total width of 100%**

RWD Grid View

- Divides web page into columns (and rows) that makes it easy to place elements on page
- A responsive grid view has **12 columns** and has **total width of 100%**

Do not confuse RWD Grid view approach with CSS Grid layout module
(https://www.w3schools.com/css/css_grid.asp)

RWD Grid View

- Remember box-sizing property?
- For each HTML element, **box-sizing** property is set to **border-box** that **ensures that padding and border are included in total height and width of the elements**. This can be done by using * universal style:

```
* {  
    box-sizing: border-box;  
}
```

RWD Grid View

- For each HTML element, **box-sizing** property is set to **border-box** that ensures that padding and border are included in total height and width of the elements. This can be done:

```
* {  
  box-sizing: border-box;  
}
```

Bristol

- The Port
- The City
- The Heritage
- The Food

The City

Bristol is one of the largest cities in United Kingdom. It has population over 450 thousands residents. It is green capital of europe in 2015 and many smart initiatives are being taken.

```
<!DOCTYPE html>
<html>
<head>
<style>
* {
  box-sizing: border-box;
}
.header {
  border: 1px solid blue;
  padding: 15px;
  width: 900px;
}
.menu {
  width: 300px;
  float: left;
  padding: 15px;
  border: 1px solid green;
}
.main {
  width: 600px;
  float: left;
  padding: 15px;
  border: 1px solid red;
}
</style>
</head>

<body>
<div class="header">
  <h1>Bristol</h1>
</div>
<div class="menu">
  <ul>
    <li>The Port</li>
    <li>The City</li>
    <li>The Heritage</li>
    <li>The Food</li>
  </ul>
</div>
<div class="main">
  <h1>The City</h1>
  <p>Bristol is one of the largest cities in United
  Kingdom. It has population over 450 thousands
  residents. It is green capital of Europe in 2015 and
  many smart initiatives are being taken.</p>
</div>
</body>
</html>
```

Without RWD

- The City
- The Heritage
- The Food

The City

Bristol is one of the largest cities in United Kingdom. It has population over 450 thousands residents. It is green capital of europe in 2015 and many smart initiatives are being taken.

Viewport (<meta>)

- User's **visible area of a web page**; varies for each device with different screen sizes
- In the absence of RWD, web browsers scale down whole web page to fit screens of different sizes
- In HTML 5 **<meta>** is used to control viewport
- **<meta name="viewport" content="width=device-width, initial-scale=1.0">**
 - disables the initial scale
 - Uses device width as viewport width
 - Inside <Head> tag
 - **width=device-width** sets width of page to follow screen size
 - **initial-scale=1.0** sets initial zoom level when page is loaded by the browser

RWD Grid settings

- Previous example had two columns 30% and 70% widths. But if you need 12 columns of equal size then this mean you need $100/12=8.33\%$ width for each column.
- If each element takes two columns then the width for each element will be $100/6 = 16.66\%$
 - `<div width='16.66%>`
- If each element takes three columns then what should be the width?
 - `<div width='?>`
- If each element takes four columns then what should be the width?
 - `<div width='?>`

RWD Grid Settings

- Make a class in CSS for each of 12 columns e.g. “**class=col-***”

```
.col-1 {width: 8.33%;}  
.col-2 {width: 16.66%;}  
.col-3 {width: 25%;}  
.col-4 {width: 33.33%;}  
.col-5 {width: 41.66%;}  
.col-6 {width: 50%;}  
.col-7 {width: 58.33%;}  
.col-8 {width: 66.66%;}  
.col-9 {width: 75%;}  
.col-10 {width: 83.33%;}  
.col-11 {width: 91.66%;}  
.col-12 {width: 100%;}
```

```
<style>
```

```
* { box-sizing: border-box; }
```

```
.header { border: 1px solid blue; padding: 15px; }
```

```
.row:after {  
  content: "";  
  clear: both;  
  display: block;
```

```
}  
[class*="col-"] {  
  float: left;  
  padding: 15px;  
  border: 1px solid green;  
}
```

```
.col-1 {width: 8.33%;}
```

```
.col-2 {width: 16.66%;}
```

```
.col-3 {width: 25%;}
```

```
.col-4 {width: 33.33%;}
```

```
.col-5 {width: 41.66%;}
```

```
.col-6 {width: 50%;}
```

```
.col-7 {width: 58.33%;}
```

```
.col-8 {width: 66.66%;}
```

```
.col-9 {width: 75%;}
```

```
.col-10 {width: 83.33%;}
```

```
.col-11 {width: 91.66%;}
```

```
.col-12 {width: 100%;}
```

```
</style>
```

→ All columns are
floating left and
have padding
15px

→ To prevent placing
any other element in
row if the columns
do not exist

```
<div class="header">  
  <h1>Bristol</h1>
```

```
</div>
```

```
<div class="row">
```

```
  <div class="col-3">
```

```
    <ul>
```

```
      <li>The Port</li>
```

```
      <li>The City</li>
```

```
      <li>The Heritage</li>
```

```
      <li>The Food</li>
```

```
    </ul>
```

```
  </div>
```

```
  <div class="col-9">
```

```
    <h1>The City</h1>
```

United Kingdom. It has population over 450
thousands residents. It is green capital of europe
in 2015 and many smart initiatives are
being taken.</p>

```
</div>
```

```
</body>
```

→ Each row should
be wrapped in a
<div> and
number of cols
should always
add up to 12

Bristol

- The Port
- The City
- The Heritage
- The Food

The City

Bristol is one of the largest cities in United Kingdom. It has population over 450 thousands residents. It is green capital of europe in 2015 and many smart initiatives are being taken.

 - The Food
- Bristol is one of the largest cities in United Kingdom. It has population over 450 thousands residents. It is green capital of europe in 2015 and many smart initiatives are being taken.

Media Queries

Syntax:

```
@media not|only mediatype and (mediafeature and|or|not mediafeature) {  
    CSS-Code;  
}
```

MQ provide the ability to specify different styles for individual browser and/or device circumstances e.g. the width of the viewport or media type, device orientation, etc.

```
<style>  
body {  
    background-color:lightgreen;  
}
```

```
@media only screen and (max-width: 800px) {  
    body {  
        background-color:lightblue;  
    }  
}  
</style>
```

When the screen (browser window) gets smaller than 800px, background colour changes to light blue.

Example 2:

min-width:480px --- change the background colour if the viewport is 480 pixel wide or wider

Media types: all, screen, print, speech - Check media types – many have been deprecated.

Media Features: height, width, min-width, max-width, color, hover, orientation, resolution, etc.

https://www.w3schools.com/cssref/css3_pr_mediaquery.asp

An Example

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
<style>
```

```
body {
```

```
    background-color: lightgreen;
```

```
}
```

```
@media screen and (max-width: 300px) {
```

```
    body {
```

```
        background-color: lightblue;
```

```
    }
```

```
}
```

```
</style>
```

```
</head>
```

```
<body>
```

```
<p>Resize the browserwindow. When the width of this  
document is less than 300 pixels, the background-color is  
"lightblue", otherwise it is "lightgreen".</p>
```

```
</body>
```

```
</html>
```

Result:

Resize the browserwindow. When the width of this document is less than 300 pixels, the background-color is "lightblue", otherwise it is "lightgreen".

Result:

Resize the browserwindow. When the width of this document is less than 300 pixels, the background-color is "lightblue", otherwise it is "lightgreen".

Media Query – Media Rule

- It is CSS3 technique that uses the **@media rule** to include a block of CSS properties only if a certain condition is true.
- **No limit** on number of media queries
- `@media not|only mediatype and (media feature) {
CSS-Code;
}`
- Browser **compatibility** issue: IE7 and IE8 don't understand media queries
- http://www.w3schools.com/cssref/css3_pr_mediaquery.asp

Mobile-first or Desk-top first?

- **Design Decision:** Desktop-first or Mobile-first?
- Desktop-first approach
 - Define default page style first aimed at desktop or laptop screens
 - Move to mobile version using media queries
- Mobile-first approach
 - Define mobile page style first and move to desktop version
 - Rather than changing style, change design for big screens
 - Faster rendering on mobile phones

Instead of changing styles when the width gets *smaller* than 768px, we should change the design when the width gets *larger* than 768px. This will make our design Mobile First.

- Find out pros and cons of both approaches !!

http://www.w3schools.com/css/css_rwd_mediaqueries.asp

Media Query – Desktop First

```
/* For Desktop: */  
.col-1 {width: 8.33%;}  
.col-2 {width: 16.66%;}  
.col-3 {width: 25%;}  
.col-4 {width: 33.33%;}  
.col-5 {width: 41.66%;}  
.col-6 {width: 50%;}  
.col-7 {width: 58.33%;}  
.col-8 {width: 66.66%;}  
.col-9 {width: 75%;}  
.col-10 {width: 83.33%;}  
.col-11 {width: 91.66%;}  
.col-12 {width: 100%;}
```

```
@media only screen and (max-width: 768px)  
/* For mobile phones: */  
[class*="col-"] {  
    width: 100%;  
}
```

Media Query – Mobile First

```
/* For mobile phones: */  
[class*="col-"] {  
    width: 100%;  
}
```

```
@media only screen and (min-width:  
600px) {
```

```
    /* For tablets: */
```

```
.col-m-1 {width: 8.33%;}  
.col-m-2 {width: 16.66%;}  
.col-m-3 {width: 25%;}  
.col-m-4 {width: 33.33%;}  
.col-m-5 {width: 41.66%;}  
.col-m-6 {width: 50%;}  
.col-m-7 {width: 58.33%;}  
.col-m-8 {width: 66.66%;}  
.col-m-9 {width: 75%;}  
.col-m-10 {width: 83.33%;}  
.col-m-11 {width: 91.66%;}  
.col-m-12 {width: 100%;}
```

```
@media only screen and (min-width:  
768px) {
```

```
    /* For desktop: */
```

```
.col-1 {width: 8.33%;}  
.col-2 {width: 16.66%;}  
.col-3 {width: 25%;}  
.col-4 {width: 33.33%;}  
.col-5 {width: 41.66%;}  
.col-6 {width: 50%;}  
.col-7 {width: 58.33%;}  
.col-8 {width: 66.66%;}  
.col-9 {width: 75%;}  
.col-10 {width: 83.33%;}  
.col-11 {width: 91.66%;}  
.col-12 {width: 100%;}
```

```
}
```

```
}
```

Typical Screen Sizes

- W3School recommendations
- ```
/* Extra small devices (phones, 600px and down) */
@media only screen and (max-width: 600px) {...}
```

```
/* Small devices (portrait tablets and large phones,
600px and up) */
@media only screen and (min-width: 600px) {...}
```

```
/* Medium devices (landscape tablets, 768px and up) */
@media only screen and (min-width: 768px) {...}
```

```
/* Large devices (laptops/desktops, 992px and up) */
@media only screen and (min-width: 992px) {...}
```

```
/* Extra large devices (large laptops and desktops,
1200px and up) */
@media only screen and (min-width: 1200px) {...}
```

# Media Query - Breakpoints

- **Remember layout problem in Bristol example!**
- **Breakpoints** can be added where certain parts of the design will behave differently on each side of the breakpoint
- For example: Breakpoint at 768px i.e. any smaller window will have 100% width for each column (elements will be stacked)
- You can **add multiple breakpoints** to support different viewport sizes
- See example on next page – adapted from -  
[http://www.w3schools.com/css/tryit.asp?filename=tryresponsive\\_styles](http://www.w3schools.com/css/tryit.asp?filename=tryresponsive_styles)

.col-4 {width: 33.33%;}
.col-5 {width: 41.66%;}
.col-6 {width: 50%;}
.col-7 {width: 58.33%;}
.col-8 {width: 66.66%;}
.col-9 {width: 75%;}
.col-10 {width: 83.33%;}
.col-11 {width: 91.66%;}
.col-12 {width: 100%;}
```

Is this desktop-first or mobile-first approach?

```
@media only screen and (max-width: 768px) {
 /* For mobile phones: */
 [class*="col-"] {
 width: 100%;
 }
}
</style>
```

```
<div class="header">
 <h1>Bristol</h1>
</div>
```

```
<div class="row">
```

```
 <div class="col-3 menu">

 The Port
 The City
 The Heritage
 The Food

 </div>
```

```
 <div class="col-6">
 <h1>The City</h1>
 <p>Bristol is one of the largest cities in
United Kingdom. It has population over 450
thousands residents. It is green capital of Europe
in 2015 and many smart initiatives are being
taken.</p>
 </div>
```

```
<div class="col-3">
```

```
 <div class="aside">
```

```
 <h2>Where?</h2>
```

```
 <p>Bristol is in South west of
England.</p>
```

```
 <h2>Education?</h2>
```

```
 <p>It has two big universities.</p>
```

```
 <h2>Transport</h2>
```

```
 <p>It has good transport
infrastructure</p>
```

```
 </div>
```

```
</div>
```

```
</div>
```

```
<div class="footer">
```

```
 <p>This page is a demonstration of RWD and
breakpoints</p>
```

```
</div>
```

How can we change or re-design  
previous example to adapt layout for  
multiple screen sizes?

# Multiple Breakpoints

# Multiple breakpoints for different screen sizes

```
/* For mobile phones: */
[class*="col-"] {
 width: 100%;
}
```

```
@media only screen and (min-width: 600px) {
 /* For tablets: */
 .col-m-12 {width: 8.33%;}
 .col-m-2 {width: 16.66%;}
 .col-m-3 {width: 25%;}
 .col-m-4 {width: 33.33%;}
 .col-m-5 {width: 41.66%;}
 .col-m-6 {width: 50%;}
 .col-m-7 {width: 58.33%;}
 .col-m-8 {width: 66.66%;}
 .col-m-9 {width: 75%;}
 .col-m-10 {width: 83.33%;}
 .col-m-11 {width: 91.66%;}
 .col-m-12 {width: 100%;}
```

```
}
```

```
@media only screen and (min-width: 768px) {
 /* For desktop: */
 .col-1 {width: 8.33%;}
 .col-2 {width: 16.66%;}
 .col-3 {width: 25%;}
 .col-4 {width: 33.33%;}
 .col-5 {width: 41.66%;}
 .col-6 {width: 50%;}
 .col-7 {width: 58.33%;}
 .col-8 {width: 66.66%;}
 .col-9 {width: 75%;}
 .col-10 {width: 83.33%;}
 .col-11 {width: 91.66%;}
 .col-12 {width: 100%;}
```

```
}
```

# Multiple breakpoints for different screen sizes

```

```
.col-1 {width: 8.33%;}
.col-2 {width: 16.66%;}
.col-3 {width: 25%;}
```

Isn't this same? Why did we define two identical classes?

```
.col-m-4 {width: 41.66%;}
.col-m-6 {width: 50%;}
.col-m-7 {width: 58.33%;}
.col-m-8 {width: 66.66%;}
.col-m-9 {width: 75%;}
.col-m-10 {width: 83.33%;}
.col-m-11 {width: 91.66%;}
.col-m-12 {width: 100%;}
```

```
.col-4 {width: 41.66%;}
.col-6 {width: 50%;}
.col-7 {width: 58.33%;}
.col-8 {width: 66.66%;}
.col-9 {width: 75%;}
.col-10 {width: 83.33%;}
.col-11 {width: 91.66%;}
.col-12 {width: 100%;}
```

```
}
```

```
}
```

max-width:600px  
100% width for each element

breakpoints</p>
</div>
```

Spot difference: For desktop 3, 6, 3 and for Tablet 3, 9, 12

# Media queries for Page Orientation

- Portrait or Landscape
- Specific rules can be applied when browser width is wider than its height

```
@media only screen and (orientation: landscape) {
 body {
 background-color: lightblue;
 }
}
```

```
<!DOCTYPE html>
<html>
<head>
<meta name="viewport" content="width=device-width, initial-
scale=1.0">
<style>
body {
 background-color: lightyellow;
}

@media only screen and (orientation: landscape) {
 body {
 background-color: red;
 color: white;
 }
}
</style>
</head>
<body>
<p>This is an example of changing web page orientation from portrait
to landscape i.e. reducing height of the browser by resizing it </p>
</body>
</html>
```

This is an example of changing web page orientation from portrait to landscape i.e. reducing height of the browser by resizing it

# Hiding an element / Variable Font size

- Can you tell what following media queries will do?

```
@media only screen and (max-width: 600px) {
 div.hideelementexample {
 display: none;
 }
}
```

- Variable Font Size

```
@media only screen and (min-width: 601px) {
 div.bigfontexample {
 font-size: 80px;
 }
}
```

```
@media only screen and (max-width: 600px) {
 div.smallfontexample {
 font-size: 30px;
 }
}
```

# Flexible Media e.g. Images

- How to handle images when switching from fixed-width to responsive layout?
- Image size with **specific width and height won't scale automatically** and probably will not fit in the containers on reduced size viewport
- Simple solution is:

```
img {width: auto; max-width: 100%; height: auto;}
```

Handle background images with media queries

# Images

- For responsive images set **width** property of **img** classifier to **100%**
- **width** property allows scaling up even more than original size of the image
- **max-width** property set to 100% will allow scaling down but never scaling to be larger than image actual size

```
<style>
```

```
img {
```

```
 width: 100%;
```

```
 height: auto;
```

```
}
```

```
</style>
```

```

```

Remember background-size with %age, contain and cover properties we studied in previous lecture?

Example Source: [http://www.w3schools.com/css/css\\_rwd\\_images.asp](http://www.w3schools.com/css/css_rwd_images.asp)

# Large and small images

- **Tip:** Use media queries to load small images on small devices rather than scaling it down!

```
<style>
```

```
/* For width smaller than 400px: */
```

```
body {
```

```
 background-repeat: no-repeat;
```

```
 background-image: url('small.jpg');
```

```
}
```

```
/* For width 400px and larger: */
```

```
@media only screen and (min-width: 400px) {
```

```
 body {
```

```
 background-image: url('large.jpg');
```

```
 }
```

```
}
```

```
</style>
```

Also can use **min-device-width** instead of **min-width** that checks device width rather than browser width and then image size won't change

# RWD Videos

- Responsive video player (scale up and down) by setting **width** property to **100%**
- **max-width** can be used with video classifier (scale down but no scale up larger than original size)

```
<style>
```

```
video {
```

```
 width: 100%;
```

```
 height: auto;
```

```
}
```

```
</style>
```

```
<video width="400" controls>
```

```
 <source src="abc.mp4" type="video/mp4">
```

```
 <source src="bbc.ogg" type="video/ogg">
```

```
 Your browser does not support HTML5 video.
```

```
</video>
```

# RWD Frameworks

- W3.css - CSS
- Bootstrap – CSS, HTML and jQuery

More: [http://www.w3schools.com/css/css\\_rwd\\_frameworks.asp](http://www.w3schools.com/css/css_rwd_frameworks.asp)

# Summary

- Basic CSS for presentation purposes
- CSS3 with variety of new features e.g. transitions, animations, background images, etc
- RWD is necessary for modern web development
  - Flexi design: Media Queries, Flexi-media, etc.
